F601HD

Transpo's new F601HD meets and exceeds the performance, functional tolerances and durability of all revision-level OEM Ford 6G PCM controlled regulators – white w/black cover, white w/blue cover, white w/gray cover. F601HD is standard with OE compliant PWM switching circuitry; plus, it has shorted field circuit protection, extreme load dump protection and ©T-Smart – progressive thermal overload protection. F601HD is the first aftermarket regulator of its kind to be Alt-98 test bench compatible. Stop by the WAI-Transpo booth at the ERA Trade Show in Grand Rapids to pick up your OE compliant, complimentary sample.
